

GLENNIES CREEK DAM UPDATE

24 November 2011

State Water advises that Glennies Creek Dam received considerable inflows on Wednesday 23 November and is now near to 100% of its capacity.

As a result it is expected that controlled releases from the dam will commence from about noon today. The releases will be less than the peak flows that occurred in the lower Glennies Creek over the past two days.

However, the releases will impact on flows in Glennies Creek upstream of the Goorangoola Creek junction. Landholders should check to see if the river levels are higher than expected and ensure that their equipment and stock are not impacted by the river flows. In some cases access may also be restricted if causeways are flooded.

For more information about storage levels and river heights go to the NSW Office of Water's *Waterinfo* website at www.waterinfo.nsw.gov.au.

Please visit the SES website www.ses.nsw.gov.au for information regarding potential flooding.

For weather forecasts, please visit the Bureau of Meteorology website www.bom.gov.au.

State Water will continue to advise landholders on its databases of any updates.
